

## Introducing **GuestConnect** for **touch-free** hospitality TV control

### Your new cloud-based hospitality TV remote control, designed for home from home hygiene

As we move into a new era of home from home expectations, the remote control you offer your guests needs to be intuitive and easy to use and, now more than ever before, hygienic to touch.

Introducing GuestConnect – the new, cloud-based remote control app from Philips Professional Display Solutions. Designed to allow your guests to control and operate the MediaSuite TV in their hotel room using their own smart phones, tablets or any other personal mobile devices with a camera to scan the unique QR code. With no need for them to touch the physical remote in their room.

#### Using GuestConnect is simple:

- At check-in, your guests can be offered a QR code, generated uniquely for them to control the TV in their room alone for the duration of their stay.
- This QR code can be scanned using the camera on their smart phones or personal mobile devices.
  - > from the image generated on a Philips 10" or 24" T-Line display at reception
  - > from an email that is generated upon check in and sent to them
  - > from the welcome message on the home screen of their in-room Philips MediaSuite TV.
- Once your guests have scanned the QR code, they will have full control of the TV – this web-based service means there's no need to download an app.
- All guests staying in the same room can scan the QR code and connect their devices.
