CUBERT

Personal light with  
integrated mains  
and USB charging

**AIR WAVE**  
DELIVERING YOUR VISION

reddot award 2015  
honourable mention

## Introducing Cubert.

Cubert is an elegant personal LED light with integrated mains and USB charging.

Cubert provides power for personal devices in an integrated form factor – the arrangement of light, USB and mains has never been achieved before in such a compact offering.

Cubert has the ability to power and charge via two mains sockets and also includes two smart charging USB ports.

Cubert also comprises an intricate high quality LED light with a touch-sensitive dimmer. The elegantly designed personal lamp uses high efficiency, long life ultra bright LEDs. Its functionality make it suitable for usage in reception areas and entrance plazas, as a bedside or desk light in guest rooms, and in conference and business centres.

Cubert is currently available in two plug variants, Type F (Schuko) and Type G (UK).

DELIVERING YOUR VISION

## Integrated power.

Cubert provides a charging facility featuring two mains sockets and two smart USB outlets for laptops, tablets, mobile phones and other personal devices.

The inbuilt intelligent USBs recognise the principal device, meaning that if both ports are in use, the first device to be plugged in is given high speed priority charging.

Due to its ultra-compact footprint, Cubert has a minimal impact on surface space and allows users to easily position their lighting and power source rather than being reliant on fixed furniture or ambient lighting. With a refined aesthetic finish and high quality components, Cubert has been rigorously and robustly tested to European and UK standards.

## Elegant personal light.

Cubert includes multiple LEDs that are controlled by a touch-activated dimmer.

Cubert has impressive light coverage aided by a head that tilts and rotates, and because Cubert is easy to position, the user can focus the light to their individual preference, rather than relying on fixed overhead lighting or heavy anglepoise lamps.

The close knit LEDs provide 426 lumens of light, with a lifespan of over 50,000 hours, all controlled by a four stage touch sensitive setting. The Cree LEDs provide a 4000K cool white, glare-free light and an even distribution of illumination, casting a single shadow and giving users a premium quality of light.

## London Bridge Hotel.

The independent 4-star London Bridge Hotel is ideally located for both tourism and business in the centre of the Southwark area.

Cubert is located throughout the London Bridge Hotel, in hotel rooms, meeting areas and the reception. The elegant design ensures that Cubert is both unobtrusive to the hotel interior, whilst providing an excellent light source and high speed charge for guests.

reddot award 2015  
honourable mention

Cubert's understated design allows it to fit seamlessly within hotels, hospitality and retail environments.

The sleek design, intuitive technology and combination of light and power make a great addition to any public space. Cubert is also our most recent product to receive a Red Dot Award: Product Design 2015.
