**SAMSUNG** Hospitality Display

# Samsung HB460 Series

Affordable and centrally manageable hospitality displays with essential function

## Highlights

- Provide a premium viewing experience, stylish LED displays for hospitality guests
- Streamline content management with Samsung LYNK™ Remote Enhanced Active Control for Hospitality (REACH) user interface (UI) and editing tool
- Cut costs and enhance security with Samsung LYNK™ Digital Rights Management (DRM) technology
- Reduce operating expenses with energy-saving features
- Reinforce controllability over in-room displays with Security Mode

## Address guest needs and staff requirements with consistent hospitality displays

Successful hoteliers know that travelers expect in-room entertainment similar to what they experience at home. However, hotel owners and managers must control costs when investing in new displays. Finding an affordable in-room display with essential functionality, superior performance and a modern design can be a challenge.

Samsung HB460 Series high-performing displays include many features hoteliers need, at a reasonable cost. The modern, streamlined design of these displays contributes to a pleasant room ambiance and superior viewing experience. The displays include content tools to simplify content management by hotel staff. In addition, the displays help reduce costs with enhanced technology and energy-saving features.

## Create an enhanced in-room entertainment environment

High-quality displays in guest rooms can contribute to an enjoyable hotel stay. With the modern design of Samsung HB460 Series displays, hoteliers can elevate guests' viewing experience. Light and unobtrusive, the displays feature a narrow 17.5 mm (0.69 in.) bezel, providing more viewing area. Such details bring hotel guests a richer viewing experience and improve the hotel brand.

Offer an enriching hotel guest experience with a wide range of entertainment options.

### Simplify information updates with intuitive tools

LYNK™ REACH is a specialized solution for hospitality environments that provides a simplified UI and editing tool. This tool organizes and displays content such as hotel information, images, logos and Electric Program Guides (EPGs) using a coaxial infrastructure.

The REACH server provides a straightforward way to manage several hundred hospitality displays remotely. This system helps reduce labor costs associated with updating each display individually. The technology also helps reduce total cost of ownership (TCO) because no set-top box (STB) or Internet Protocol (IP) infrastructure is needed.

The REACH interface is designed to display content on in-room screens and provide PC-based content management for hotel personnel. In-room screen content includes hotel information and marketing messages for guests. The interface helps content managers readily edit and manage information. It includes an exclusive ticker function that enables hotels to display important marketing and advertising messages. These messages, along with weather and tourism information can be effectively delivered and updated, with supported interval settings.

### Reduce costs and improve security with robust DRM technology

Samsung LYNK™ DRM technology provides hoteliers, facility managers and owners with a safeguarded and cost-effective alternative to traditional hardware-based content protection systems. This technology allows encrypted content to pass safely and to display on hospitality screens.

A software-only implementation, Samsung LYNK™ DRM technology provides quicker recovery for Conditional Access System (CAS) problems. Enhanced functions include a support video on demand (VoD) system. To help ensure reliability, the technology also supports additions to cable head-end equipment.

### Reinforce controllability over in-room displays with Security Mode\*

Samsung HB460 Series provides the unique and strong hardware controllability with Security Mode. With this feature, managers can disable the some critical functions of display such as Teletext (TTX), HDMI port, USB port and so on. By controlling H/W function with Security Mode, managers can easily prevent changing display settings, watching non-compliant content with USB or transmitting unwanted Teletext with signal. For the customer who requires high content management level, this Security Mode can help their room in complete control.

\*Security Mode is only available for Europe models.

### Dedicate the remote controller for up to 10 different groups of displays

Samsung Hospitality Displays provides the Multi-code remote controller which can be dedicated to a specific group of displays. Manager can group up to 10 groups and dedicate the remote controller to one specific group. Once the remote controller is dedicated one group, it will affects only to the displays of the same group. In the place where lots of displays shows different channel such as gym, this feature minimize the entanglement of the remote controller signal and provides comfortable and personalized service to the guest.

### Improve the bottom line with energy-efficient features

Samsung HB460 Series offers many features to help businesses save energy and reduce costs. The LED displays are cost-effective because they use less energy, emit less carbon dioxide (CO<sub>2</sub>) and require less maintenance than conventional hospitality displays. Additionally, the displays are built with fewer harmful materials than cold-cathode fluorescent lamps (CCFLs), so manufacturing and recycling processes are more efficient and environmentally friendly.
