

Samsung SMART Hospitality Displays

HD590

The unrivalled premium SMART hospitality display for premier hospitality environments

Create an enhanced in-room entertainment experience

Premium hotels want to provide the superior quality in-room experience that sophisticated travelers expect, with chic TVs that offer a range of features and content options. In addition to ready access to various personal, digital and On Demand content, today's guests want an interface that is simple to use. Research shows that guests typically carry more than two mobile or smart devices, which signifies that guests are also bringing their own entertainment options to the hotel. This is why properties need new strategies to embrace and support this smart mobile trend.

Samsung SMART Hospitality Displays are integrated, high-performing TVs that include many desirable features and an interface designed for ease of use. The displays create a stylish room ambiance and provide a superior viewing experience in a streamlined design. They deliver myriad entertainment options for guests through smart connectivity features. To enhance the hotel's brand, staff members can customize welcome menus with a straightforward interface. Additionally, hotels can stay on budget with affordable content-streaming options and other cost-saving features.

Upgrade premium hotel suites with chic, slim displays

Samsung SMART Hospitality Displays are designed especially for 4-star, high-end hotels with an ultra-slim and slim profile that creates an elevated level of sophistication. The displays feature Samsung's advanced LED technology that yields an extremely thin form. Especially, HD790 Series features ultra-slim profile with edge LED technology. The sleek profile enables the displays to fit into tight hotel rooms, saving space for in-room devices, easily embed into walls or furniture and further elevate the in-room decor. The displays also feature a narrow bezel. Without a cumbersome frame, the TVs virtually blend into the background, allowing guests to focus on the images projected rather than the equipment delivering them.

Deliver interactivity and rich content to guests with easily managed and customizable solutions

Combine rich content, interactivity and manageability

Leverage a bi-directional and interactive solution for IP hotel infrastructures: LYNK™ SINC

LYNK™ SINC provides hotel guests with a luxurious and entertaining stay built around patrons' schedules or purpose of visit, while ensuring interactivity through an IP-based solution. The solution offers a new grid-type template for delivery of richer content to guests. In addition, LYNK SINC serves all provided content through coaxial cables and IP networks, along with two-way interaction through the solution's linkage to a PMS server. Easily customizable by hotel managers, the solution delivers centralized management of hundreds of hotel displays with controls ranging from TV status monitoring and controlling to guest grouping for differentiated content delivery.

LYNK SINC's new function, IPTV Standalone Solution, is available without SINC content through a free license. Through this function, hotel personnel can control content by editing the IPTV channel list and cloning the channel list to a USB device and copying it to individual TVs. This way, managers can efficiently offer guests IP TV without having to purchase any additional solution.

The guest experience is enhanced with access to services and information, such as local event and tourist information, and available discounts. Useful hotel information such as room service or spa menus can be accessed through customizable widgets, as well as free, automatically updated weather information so guests can plan outdoor activities. LYNK SINC enables hotels to provide up-to-date flight information so guests can coordinate checkout times with flight departures and supports personalized, real-time guest messaging. All of these professional capabilities are provided simply over an IP network without the need for STBs, minimizing maintenance complexity and eliminating the cumbersome presence of STBs in the property's hotel rooms.

Easily manage centrally and remotely with LYNK™ REACH, a flexible and low-cost coaxial infrastructure Hospitality TV solution

Designed exclusively for hospitality businesses to help them manage content and control displays over current RF cables, LYNK™ REACH delivers remote, central and cost-efficient management of in-room displays. LYNK REACH is specialized software provided with LYNK REACH Server for hospitality environments. The software solution provides a simplified UI and editing tool that organizes and displays content, such as hotel information, images and logos, using existing infrastructures. LYNK REACH offers hoteliers advanced advertising functionalities and Channel Bank Management for Pay TV Services. In addition, LYNK REACH improves usability by enabling hotel managers to monitor room status, recent deployment and activity and with a simple, easy and intuitive user interface (UI) through Project Creator.

Increase guests' comfort with simplified audio playing through the TV

Screen Mirroring

Screen Mirroring enables guests to share the screen of a mobile device on the TV. This sharing capability includes the screen configuration in addition to content. This means that the TV displays exactly what displays on the mobile device, with no content restrictions.

Digital Living Network Alliance® (DLNA)

Digital Living Network Alliance (DLNA) technology enables guests to play personal content through a wireless connection on their room TVs. Content includes movies, photos and music.

Soft AP

Soft AP provides a software access point (AP) or hotspot. Up to four devices can connect wirelessly to the AP. Hotel managers can change the signal level and channel of the Soft AP to suit the connectivity environment of different rooms.

Figure 6. Wireless connectivity enables wide variety of content sharing

Deliver quicker and higher TV performance with Quad Core and Instant On

With a Quad Core processor, guests can experience smoother navigation and faster access to smart features for enhanced TV viewing and operation. With Instant On, the TV boots in only 2 seconds to reduce waiting time.

Figure 7. Quad Core processor enables smoother and faster TV performance

Enhance content protection with a pure software DRM solution

Samsung LYNK DRM technology provides hoteliers with a protected and cost-effective alternative to traditional hardware-based content protection systems. The solution allows encrypted content to pass safely and to display on hotel TVs.

A software-only implementation, LYNK DRM technology reduces the need for additional equipment and provides quicker recovery for Conditional Access System (CAS) problems. To help ensure reliability of the system, coverage extends to the enlargement of head-end equipment for cable operators.

Safeguard content with a software-based, reliable and economical DRM solution

Optimize device and resource management to minimize TCO

Samsung SMART Hospitality Displays provide centralized management from a control room. The displays' convenient and efficient management features reduce staff maintenance visits. Because the displays are connected to the hotel's network infrastructure, management can monitor each in-room TV and instantaneously deploy content grouping policies and EPG from a control room. The simplified configuration with only the display delivers the convenience of a set-top box (STB) configuration without the complexity, cost or hassle.

Feature and Benefit

Model	Feature and Benefit
